However, now it is Necessary, that is, it is also declared. To this version of Firefox has been added extra layers of extra security to respect our privacy. Our traffic is retransmitted and encrypts three times when it passes through the Tor Project network. If we have this browser installed, from Redeszone we recommend uninstalling UC Browser, since there is no possible solution and, although there is no evidence that the security failure could have been exploited by informed pirates, either there are no on the contrary. With Tor Browser we will avoid trackers, with which advertisers can not follow us, automatically erasing cookies and our history when we finish navigation. Dr. Web has discovered this function, and bad security, in UC Browser this feature was hidden for Google (which shows that they do not bother to check the applications of their store) and for users. The difference is that now you can access psâginas .onion belonging to the Tor network, which in turn is one of the popular más of the Dark Web.
