Thickness of aluminum foil cm

Gardening can be a relaxing and rewarding task, but when you've put a great amount of effort into your landscape, it can be incredibly frustrating when things go awry. But don't let your garden get the best of you; control weeds and ward off pests with one of your most common household items, aluminum foil.This versatile paper-thin metal has more uses than covering the leftovers in your casserole dish. In fact, aluminum foil can be used for cleaning, cooking, crafts and, as we mentioned, gardening. Whether it's managing your seedlings or preventing messes, the versatile qualities of aluminum foil can do all of your hard work, so you can relax and enjoy your outdoor sanctuary. Read up on how to use aluminum foil to help gain control of your garden and put an end to your gardening woes.Don't want to plant your seeds directly in your garden? Use seed starting pots to get your plants in to tip-top shape before transplanting them. Don't worry about tons of expensive pots; if you have a roll of aluminum foil, you have everything you need to make the perfect starter pots for your seeds to call home.The cardboard tube from a roll of aluminum foil will serve as your pot. Cut the tube in to 3-inch pieces. You can also use the tubes from paper towel rolls, toilet tissue or cardboard tubes. Once you have all of your tubes individually cut, wrap the tubes with aluminum foil to keep the cardboard from falling apart when wet.Take your new "pots" and closely pack in a waterproof tray or shallow pan. Fill each of them with seed starting mix and plant the seeds. When they're ready, remove the foil and plant your new seedlings, pots and all.Adorable, graceful and known for their blank stares at oncoming traffic, deer are delightful woodland creatures that roam virtually everywhere, including your garden. A ubiquitous garden threat, deer damage to plants and shrubs happens to be the No. 1 complaint by rural and urban gardeners alike. Those long svelte legs easily leap over fences, giving the animals open range to graze on the flowers and plants you've worked hard to grow.Deer can be especially harmful to young plants and shrubs that have barely started growing. You can protect shrubs or saplings by wrapping their bases with aluminum foil. The foil should at least be as high as your waist because deer are very adept to feeding on plants that are shorter than they are. This foil force field can also deter other pesky nibblers like mice and rabbits.The reasons to use garden solutions vary from gardener to gardener. Some use them as nutrient-enhancing solutions, while others use these mixtures as natural ways to keep unruly pests out of the garden. No matter the reason, these solutions don't come cheap and cannot be wasted.So when you need to pour garden solution back into its original bottle, use a homemade garden funnel to reduce the mess and to save it from going to down the drain. Just grab a sheet of aluminum foil, roll it up into a cone, insert the tip of the cone in the bottle and pour. No hassle and no mess!A fruit-bearing tree is a delectable addition to any garden. Every season you're guaranteed fresh, ripe fruit right from the source. Unless, of course, others get to it before you do. Birds are known pillagers of fleshy tree fruit, and they show no mercy for your taste buds.Protect your fruit trees with fishing line tied with twisted strips of aluminum foil. The light reflected from the foil wards off the birds, as does the sound of the foil moving in the wind.Munching mammals shouldn't be your only garden worry; an infestation of ravenous insects can also kill your plants quickly if you don't take care of them. Insecticides and pesticides are quick and permanent solutions to bug problems, but if you're growing fruits and vegetables you'll end up ingesting those harsh chemicals into your body.Keeping bugs at bay doesn't have to require a chemical solution for you and your garden. Instead, cut up small strips of aluminum foil and mix them with your mulch. The shiny side of the foil will reflect light, deterring some light-sensitive pests from your vegetable patch. As an added bonus, the foil will also reflect nourishing light back on to your plants.Adapted from Amazing Uses for Household Products: Bleach, © 2009 Publications International, Ltd. We now know that processing aluminum foil can harm the environment. But we also know that aluminum foil is 100% recyclable. Did you know that there are lots of other creative and practical ways to reuse aluminum foil?I usually use aluminum foil to wrap my PB&J sandwich that I take to work. After I eat my sandwich, I always save the foil and take it home to wrap another sandwich in.But sometimes the routine gets a little boring, and I find myself searching outside the box for new and different ways to reuse foil. And once I get those creative juices flowing, I can think of so many unique reuses. Here are some of my favorites:1. Keep the Mice AwayEeeeew.I really don't like talking about this particular reuse, especially since I just did it last night! But let's face it, mice are everywhere—especially if you're living in a 100 year-old six floor walk up apartment in Manhattan. My ancient apartment has several cracks in the wooden floors and walls. And you know what that means.CRACKS = easy access for rodentsRecently, my boyfriend and I realized that if you take some old aluminum foil and squeeze it through cracks in the walls, the mice will disappear. Even if the foil doesn't completely fill the crack, the sharp texture of aluminum scares the mouse from trying to slide through it. It's much more humane than using mouse traps or hiring an exterminator.2. Scouring SpongeAluminum Foil's rough texture is perfect for scrubbing those grimy pots and pans. You won't even have to wash the foil before reusing it. And you'll save money because you'll never have to buy a brillo pad again. Just be sure to wear gloves so you don't cut your hands.3. Makeshift TV/Radio Antenna Not all of us are lucky enough (or rich enough) to take part in the so-called booming trend of "Digital Cable." Some of us have instead stubbornly held onto watching basic cable on a TV set that was purchased in 1986. While such simplicity does have its perks, my "antique" TV and I definitely have a love/hate relationship. This is mainly due to a constant fuzzy screen, and the fact that the metal antenna that sits on top never seems to be helping ANYTHING. But thanks to my stash of used aluminum foil, all I need to do is take a little piece of foil and wrap it around the antenna. Voila! I get a clear picture. I have no idea why or how it works, but it does. I'm sure there's some scientific explanation behind it, but I'm perfectly content knowing what I already know Cooks know the value of aluminum foil, particularly around the holidays, when it plays a role in everything from roasting vegetables to storing leftovers. For something so unabashedly simple, aluminum foil has a surprising number of uses—not only in the kitchen, but in other rooms as well (and even outdoors). Scroll down to see five ways this versatile pantry staple can help you take on the household challenges faced not only this time of year, but in all seasons.1. SCRUB POTSPhoto: shutterstock.comCooking is fun; cleaning isn't. If your meal preparation has left a pot, pan, or casserole dish with a layer of stubborn gunk along its bottom, try this time- and sanity-saving trick: Crumple a sheet of aluminum foil into a crunchy ball, then use it as you would a piece of steel wool. The final step? Do a happy dance.2. PROTECT TREESPhoto: shutterstock.comMany tree species, fruit trees most of all, are subject to a particular nuisance: mice, rabbits, and other creatures eating the tree trunks' lower bark. If unchecked, those hungry garden pests can seriously compromise a tree's overall health. Put an end to the problem by wrapping the trunk with a double layer of aluminum foil.3. MAKE A FUNNELPhoto: shutterstock.comThere aren't many times when I think, "Gosh, I wish I had a funnel!" But on those rare occasions when I realize that what I'm doing would be so much easier with a funnel, I chastise myself for not owning one. Then I remember that you can always make your own, quickly and easily, using a sheet of aluminum foil.4. CLEAN IRONPhoto: shutterstock.comYour clothing iron doesn't need to be cleaned with the consistency of, say, the bathroom sink. But there are times when starchy buildup can actually subvert the appliance's proper operation. When that happens, run the hot iron over a piece of aluminum foil. The starch transfers to the foil, and the iron comes out clean.5. POLISH SILVERPhoto: shutterstock.comTo polish silver using items you have on hand, follow these steps. First, line a pan with aluminum foil. Next, add one tablespoon of baking soda and one tablespoon of salt. Slowly pour in a half-cup of vinegar, then add one cup of boiling water. Finally, put your tarnished silver into the mixture, letting it sit for just 30 seconds. Pull the silver out with tongs (remember, it's hot), buff it to a shine using a soft cloth, and suddenly—presto, you're ready for dinner! Dull scissors are the bane of crafters everywhere. Sharpen worn-down scissors by stacking several layers of aluminum foil, folding them in half, and then cutting them with the blades; six to eight swipes should leave your scissors nice and sharp. Related: 6 Easy DIY Projects—No Tools Required Foil makes an inexpensive improvised slider to help move heavy furniture. Simply wrap foil around the bottom of the legs, dull side down. (The dull side is more slippery than the shiny side.) The foil will make it easy to slide the furniture across the floor—no heavy lifting required! Related: Moving 101—Easy Ways to Make the Most of Any Move Use foil to make an instant, disposable funnel to transfer messy liquids like oil, or sticky ones like honey. Simply double up a length of heavy-duty aluminum foil and mold it into the shape of a cone. The highlight of this easy hack is that there's no messy cleanup—when you're done, just throw it away, or clean it off and toss it into the recycling bin. Related: 10 Toolbox Hacks for Your Next DIY Project Line the bottom of your oven or grill with foil before cooking; once you're done, simply remove the dirty foil and throw it away. To really get your money's worth, before tossing the old foil, crumple it up and use it to scrub off stuck-on food debris from grates or baking pans. Related: New and Notable—10 Must-Haves for the Luxury Kitchen The springs that hold the batteries in your remotes, flashlights, and toys can lose tension over time and gradually cause your devices to stop working. Use a small piece of foil as a quick remedy to this annoying problem. Fold the foil until you have a small pad that is thick enough to wedge between the batteries and the spring. This will eliminate the extra space and help keep everything in place. Related: The 10 Commandments of Buying the Right Tools Foil can be a time-saving superhero on your next paint project. Eliminate the tedious task of removing door hardware by wrapping knobs and hinges in aluminum foil to protect them from paint spills. You can even line the roller pan with foil to make cleanup a breeze. And if you're not quite done painting but need to run an errand, try wrapping your paintbrush in foil, then storing it in the fridge. Related: 10 Top Tips to Make Any Paint Job Go Faster Use foil to salvage a loose vinyl floor tile. Position the errant tile in place on the floor, put a piece of foil on top, and run a hot clothes iron over the tile a few times to melt the glue underneath. Lay a pile of books or bricks on top of the tile to hold it in place while the glue resets. Try the same trick to smooth out bumps and bulges in sheet vinyl flooring. Related: Just Floored! 15 Totally Unexpected DIY Flooring Ideas Tuck a sheet of foil underneath the ironing board cover so that it reflects heat from the iron, allowing you to iron both sides of your garment at once—and cutting ironing time nearly in half. Related: 8 Low-Cost Upgrades for a Hassle-Free Laundry Room If you want to extend the usable life of steel wool pads, store them on top of a crumpled ball of foil to prevent the steel wool from rusting. For longer-term storage, wrap the steel wool pad in foil and place it in the freezer. Related: 13 Clever Alternative Uses for Steel Wool Improve the efficiency of your radiators by making a DIY heat reflector out of foil. Tape a sheet of heavy-duty aluminum foil to a large piece of cardboard with the shiny side facing out and place it behind the radiator. The heat will bounce off the foil and into the room instead of being absorbed by the wall. If your radiators have covers on them, tape a piece of aluminum foil under the lid, shiny side down, to direct heat down and into the room. Related: 11 Stylish Ways to Enhance—or Hide—Your Radiators Polish your silver with your own home-made tarnish remover. Line a glass pan with foil and place the silver into the pan, making sure that each piece touches the foil. Add four cups of boiling water, followed by a quarter cup of baking soda; double or triple the recipe as needed to completely cover the silver. The mixture will start to foam, and the tarnish will adhere to the foil (the process will take several minutes). Heavily tarnished pieces may require several treatments. Remove the silver from the pan, rinse with clean water, and dry with a soft cloth. Store the silver on a sheet of foil to avoid future tarnishing. (This process is not recommended for silver-plated pieces.) Related: 10 Home Cleaners to Borrow from the Pantry Want a cleaner, tidier, more organized home?
