How do we resolve conflicts when fundamental sources of knowledge and beliefs are involved, such as science and theology? Howell reveals that the cosmological patterns developed at this time remain monumental solutions to the permanent problem of how theological interpretation and empirical investigation interact with each other. The central argument of this convincing book is that the use of the Bible in primitive modern cosmology is considerably more complex and subtle than it has previously been recognized. Drawing on the writings of Lutheran and Calvinist astronomers, natural philosophers and theologians, Howell analyses several underlying interpretative models that influenced the way these historical figures saw the reciprocal interaction between books of nature and Scripture. He argues that while they diverged on how disciplines of astronomy, physics and theology should relate to each other, most thinkers shared the common goal of finding and explaining the true system of the universe. The astronomer Avi Loeb says aliens have visited, and does not joke Da David L. Block, Kenneth C. The debate on the ultimate source of truth in our world often contradicts science to faith. In fact, some high-profile scientists today would like us to completely abandon God as a source of truth about the universe. In this book, two professional astronomers reject this concept, claiming that today's science is unable to pronounce on the existence of God, but that our notion of truth must include both the physical and spiritual realm.
