Find the square root of 44100 by prime factorization method. Finding the square root of 441. Find the square root of 441 by prime factorization method. Find out the square root of 441. Find the square root of 441/961. Find the square root of 44100. Find the ones digit of the square root of 441. Find the number of digits in the square root of 441.

Jack Dorsey does not know how to evaluate his performance. It is at the beginning of May, and Dorsey has just finished its annual reviews of Square 800. Now he needs to complete him. So the square CEO sends a Google document for the entire company that urges a feedback, but makes two suggestions that border the border on masochistic: all comments should be anonymous, and all comments should be visible to everyone within the agency. Ã ¢ â,¬ "Write whatever you want, Ã ¢ â,¬" Dia Dorsey telling her troops, adding he wants to learn - where I did well, where I hurt, and where I completely fucked things up. ¢ â,¬ When we meet for a walk in a gray morning in San Francisco several weeks later, Dorsey is of great spirit. He jokes about excessively cautious Californians who refuse Jaywalk; And in the elevator when we come across two police officers leaving square seats, Dorsey greets them with a smile and a handshake that adapts to a mayor of a small city. He tells me that he has not read all the feedback still from his square colleagues "received more than 500 answers ... and they will only turn that much of it stressed the need more Ã ¢ ¬ Â focus" in the company. Be intentionally vague, of course. When I wonder what degree will give you in the self-assessment that he is writing, Dorsey responds bravely, Ã ¢ â â "is not a f." Was it about to? The square is no longer the high flight start that it was once. When Twitter Cofounder Dorsey launched the company in 2010, expert experts announced the potential of him to promote the space of stagnant payments. Startup has developed a new credit and debit card reader, which could attach to mobile devices and let merchants accept payments practically anywhere. The company has also launched a promising digital-wallet app, which has allowed customers to connect their bank cards with their phones to buy goods - no longer need plastic or paper. At an adoring press, Square had a similar talent to an apple for design and seemed destined to revolutionize any number of business domains: data, e-commerce, social, offers. At the beginning of 2014, investors had immersed $ 340 million in starting, which was evaluated for $ 5 billion. So, mood has acid. Nick Bilton's Tale Insider, dotted Twitter, painted a little flattering portrait of Dorsey as a backstabing selfish who took more credit for the success of Twitter than he deserved. Not long after the relationships are issued that the square had delayed its IPO due to revenue problems. Then a rocket piece in the Wall Street Journal depicted as a company that desperately seeks an exit after losing $ 100 million last year. The problem? Square basic business, le processing and taking a tiny cut for the effort, it just wasn't really profitable. To put a finer point on it, venture capitalist Fred Wilson recently wrote a blog post suggesting that the square would soon have to do â¨some rigid things". The next few months for square will be pivotal. As it burns through cash, the company create new sources of income to justify its high assessment; in the process, it will try to prove that it can create a hugely profitable business, as well as a transformer. Contrary to some of the most terrible forecasts, Square will not go bankrupt tomorrow. But in a culture in which fasting fails is a badge of honor, and where every startup – no matter how trivial – aims to change the world (an ambition so cliché has been recently paraoiato on the Silicon Valley of HBO, which Dorsey claims he has never seen), the idea of building an enterprise that is simply sustainable, rather than revolutionary, can seem worse than a fire. Square has done a huge number of right things; What's more, it's gone through an extraordinary number of obstacles just to get to this point. Yet, Dorsey admits that his team now faces "existential issues" on the future of Square. Next to the cemetery of oversped startups, there is a purgatory in which companies like Groupon and Zynga struggle-success but not relevant, almost (or barely) profitable but unconsequential. These are companies that, despite their promise, have never managed to escape the clutches of mediocrity. Does Square now face the same fate? As if he proves that he and his company will never accept mediocre success, Dorsey and Square spent the last 12 months in a frenzy. The company has embarked on an aggressive effort to digitize more and more aspects of our money-peer-to-peer transfers, cash loans, business software, online markets, ordering. This is a risky strategy that placed the company not only against Google and PayPal of eBay, but also against Amazon, Etsy, GrubHub, Yelp, and a group of traditional financial players. Finance is probably the last unregistered Silicon Valley industry. "With any challenge," Dorsey says, "there is a psychological reaction of struggle or flight: Or you keep fighting, or you leave." Of course, he chose to fight. For a company that deals with obscure financial intermediaries and vigorous regulatory issues, Dorsey has already done the difficult job of making customers keen on Square. His talents are not much in hard-core engineering, such as, for example, Elon Musk 's-than in conceptualization and design. Dorsey is the kind of guy who can say, without irony, that bills are "sexy" – and actually convincing sound. Or is the type of guy who will ask his developers to change at the last moment the color of the screen of an app – as he recently did for a new product called Square Cash – from water to bright green. "Jack came and was like, 'I don't like this green-it's not happy enough,'" recalls product leader Brian Grassadonia. "We were like, "What the hell are you talking about?" The different hue Dorsey chose, Grassadonia says, at first glance seemed "horrible, andhe remembered the disease." But soon, he adds, "I really came to love him. It is perfect." If you take oneTo the app, it actually seems almost perfect. It is a good example of how the aesthetic discernment and marketing of Dorsey Savvy catapultato square beyond its competitors in the first days. Yet, these same gifts of Dorsey, which have masked more subtle problems than plagiarism Square. Square's revenue strategy. Square was like building a company that sells soda simply for bottle storage: only at large scales can all Nickels add-up.With Question, Dorsey and Cofounder Jim McKelvey deserve credit to tear through the complexity of commercial transactions: square reader, their minimalist device for âswiping credit cards that connected to phones through the audio port, was a master of simplicity, as was the Quite the unique model of the unique model of charging traders A rate for 2.75% per transaction, an approach that has distributed the structure of the industry's antiquated costs (with all its hidden taxes). These innovations have opened square to a massive and growing industry of micromerchants, baristas, florists, owners of gastronomic trucks "who flocked to service. At the end of 2011, the Company was processing $1 billion on an annual basis; A year later, not long after the software launched the company, the software that turns an iPad into a point-of-sale terminal - its annual payment volume had mounted on $10 billion. Investors went on board. In August 2012, when Starbucks invested $25 million as part of a round of $200 million valuing the company at $3.25 billion, Square was chosen to process all credit transactions made at 7000 branches of the United States stores of the coffee chain. Starbucks CEO Howard Schultz Proclaimed Square was "The fastest growing opportunity we have never seen in terms of customer acceptance. The earnings of the square" told a different story. Making money from processing payments is a bit like building a company by selling soda simply for the bottle store: it takes a lot of effort only to convert a bottle of coke of $ 1 into a nickel return, and only in extreme way can start to sum up. More worrying, with the activity of Square, most nickels go to the financial intermediaries with which it works. At each stroke, the square takes its small cut of the transaction price, but 70% (or more) of this commission often goes to Visa, Mastercard and other institutions that manage the detection of risks and fraud, as well as prizes and card services. With Express American Express cards, Square also loses money on charges. â€ "If your business model is based on penny from transactions, you are in trouble, â€" says a former high-level executive in one of the big networks ofwho worked closely with the square. The payment data collected in the process are extremely valuable – monitoring who bought what, when, and where. At the individual store level, this data can show hot items, customer loyalty and employee output; In aggregate, it can provide useful analyses, such as, say, the average price of Lower Manhattan versus Williamsburg, Brooklyn. Despite this, the only way to reach Squareâs short-term profitability was to reach a mass scale. "The reality is that putting a reader on the phone and stealing a credit card is a very low-margin business", says Anuj Nayar, senior director of PayPal, which, despite offering the same technology as Square and processing a higher volume of mobile payments in 2012, was seen as a dying incumbent. (Nayar attributes the negative sentiment towards PayPal to the "Jack Dorsey bubble" which could inflate Square.) Dorsey realized that processing payments couldn't be the end of the game. "We always knew it wasn't our core business", he says. "We knew the real business was about data".In his first launch to investors, he outlined some of these ambitions. Yet the company has shown little ability to evolve beyond payment processing. Part of the reason was a lack of leadership within the company and paralyzing organizational chaos, according to a number of former employees. As the company tried to keep up with its rapid growth, Squareâs leadership seemed incapable of realizing new product ideas. He wasn't even sure who was supposed to make the products. "We started having conversations like, "Should we put more emphasis on the seller side or the buyer side?" recalls Dorsey. "It became seller against buyer, and we lost sight of the connection between them. ended in Square Wallet, which was initially called Cards Case. Although Dorsey won't acknowledge it publicly, the internal goal, says one source, was to "own both sides of the bank" "seller and customer" so that the company could one day "exclude credit card companies altogether." (At the weekly meetings, former COO Keith Rabois, only half of the normal, used to announce the expected date when the processing volume of Square's payments would exceed visas.) Instead of helping consumers pay with their phones, like many other digital wallet products, the SquareÃ¢Â¦s Wallet app allowed consumers to open a virtual card with a nearby store and then pay for the items simply by saying their name upon arrival. Despite her popularity with the cutting edge of technology, Wallet has barely seen any adoption. Few merchants have accepted it, partly because few consumers have paid for it, and vice versa. Even where the Square Wallet was accepted, cashiers often did not know how it worked. "It wasn't necessarily faster or cheaper", says Dorsey, looking back. "It seemed more futuristic, but that doesn't make it any better." One of the main reasons why the Square-Starbucks alliance was to strengthen Portfolios in stores Coffee chain in the United States. But to block the deal, they say the workers, the square had to accept a substantially different payment facility with Starbucks, if paid payments were carried out with Wallet or not. The effect was to eliminate all the margins of SquareÃ ¢ Â|. While the exteriors praised the partnership, Square Square He knew what he was coming: the following year, the company would have lost 25 million dollars from Starbucks transaction costs alone (and will continue to incur losses until the contract is expired next year). Essentially, square leaders saw the Gambit as a marketing expense for Square and Wallet. â € œall the Will Say Is Therere Was a Plan, to a conscious decision to make the Starbucks agreement, and we decided to place that bet - obviously no one forced us to do it, â € say the investor Square Vinod Khosla, defensive. For him, Wallet was not a bad product, he just came too soon. â € œThe Square payment volume was a task one â € "This is all Jack would have to talk. You can't reach step five before building passages one, two, three and four.â € With the payment volume of Square reported on the track to hit $ 20 billion by the end of 2013, Dorsey continued to collect praise Lavish, gracing magazine covers (including this), teasing that could one day run for the Mayor of New York City, and combining Disney's advice. At the end of the year, Dorsey appeared in a profile of 60 minutes incandescent, where he surprised the reporter Lara Logan with Square Wallet. Logan started the segment saying: Â When Jack Dorsey invented Twitter, he changed the way we communicate. Him Him of him Square will change the way we buy? Â The ambitions and expressions of Dorsey in almost every turn assured the crowd that the company would be amateur. Even when Wallet was struggling on the market, some colleagues say that Dorsey would polish the weak numbers internally. And yet, here is the thing: the activity of Square is not bad. It's not almost the supernova who was made to be. Despite the recent negative wave, Square continues to expand. The payment volume, excluding disastrous Starbucks agreement, grew more than 350% over the past two years and will refer to about $ 300 million this year in gross profit. While the company is still incurring heavy losses, the managers of Square make a convincing case, supported by internal business documents, which this is mainly by choice. He is significantly investing in recruitment, marketing and new products. If he didn't, Square could be a profitable society. â € œThe voices of our death were very exaggeratedâ €, says the CFO Sarah Friar. Square's death noises, says the CFO Sarah Friar, â € were very exaggerated. While Square has actually made preparations for a potential IPO, corporate executives also insist that many details published on a public offer or A potential acquisition have been incorrect. A member of the council goes to arguing that the stories were planted by a competitor or someone with an ax to grind, while dorsey simply The boring narration. (â € œcâ € ™ is a storage phase, then a Takedown phase. Facebook, Google and Apple got everything; Twitter is getting, and Square is about to get it too. Who cares? â €) And while Square employees will tell you that Dorsey's vision has not changed despite the sumps of Square, Square, Finally, the company's attention has been moved beyond payments. After all, you must: Plan B is the only option for a vital future. (Piazza takes release with the fast company that calls the move beyond payments at Ã ¢ â,¬ Å "Plan b.Ã ¢ â,¬) Dallen, the visionary now leads the charge is not Dorsey, but Gokul Rajaram, A 39-year product engineer wearing his smartphone into his shirt chest pocket and exudes a nerd affection for data. When Rajaram joined Square from Facebook in July 2013, he decided to interview employees from every part of the company to find out what fixing is needed. The verdict was predictable: Ã ¢ â â "We were doing a great job building a lot of features on the side of business payments, Ã ¢ â â" He says. Ã ¢ â,¬ "But we had to be more aggressive and accelerate the construction products at the top of payments data." Some teams were in inches to this goal before Rajaram arrived, but he found the efforts Ã ¢ â,¬ Å "Nebula.ã, â,¬ After all the hands meet in August, he outlined what the square areas would be (and would not work). Because the company has kicked in overdrive, the portfolio has been interrupted. Because © Pressure salt to increase revenue, Gokul Rajaram is renewing the Piazza product line. In a sense, the company stepped up from Dorsey, which held a lower profile late. The company is now pushing The idea that there are Ã ¢ â,¬ Å "multiple visionaries" today in Square. Ã ¢ â,¬ "It's not a singular force, Ã ¢ â,¬" Darney tells me about coffee. Ã ¢ â,¬ "I told the company more often, if I have to make a decision, we have an organizational failure." Many colleagues, at least they say the thrust of Rajaram was released. Considering that before, most teams were developing functionalities after the official registry official, Rajaram reorganized the company in smaller teams to create specific and stand-alone products that can generate profits. They were each responsible for a close mission (eg. It was killed: most engineers migrated to more exciting products such as order, a new service that allows customers to order in advance in restaurants, and nobody wanted more work on it. Ã ¢ â,¬ "The teams have Return the call, Ã ¢ â,¬ "says. (a square spokesman disputes this characterization of the portfolio area, saying:" The order app is an evolution of the portfolio. We wanted to take what we were doing with the "Discovery" portfolio MERCANTILE, menu items, Payment - Apply it to the order.Ã, â,¬) The signs of a renewed sense of purpose are obvious all the square offices and a better film poster sitting near the Rajaram team capture Quest IV square: the search for not -payments revenue. This is necessary for urgency. The products of the reader and the square register are no longer unique; An uptarts and large rival SLEW such as PayPal, NCR and Verifone now offer its equivalent iPad systems, which threaten to eat business of the merchant quota and Piazza payments. Ã ¢ â,¬ "payments are a a Game, says Brad Smith, CEO of Intuit, who initially tried to own the space before closing the margins was too low and the competition too crowded. It's going through a transition phase and adding components: they'll have to do more magical things for small businesses than just accepting electronic payments". And there may be a finite period to pull this transition out. For decades, credit card companies have been experimenting with the high processing fees charged by merchants. It â ¬ "is complete bullshit", says Paypal CofOunder (and Square Investitor) Max Levchin. Due to regulation and new payment alternatives like Bitcoin, many industry sources I've talked about agree that transaction fees will decrease significantly over time. Card networks are under immense pressure ... from dealers and legislators, among other entities – to lower processing rates, which are long (and vaguely) justified by citing fraud and risk liabilities, while providing the transparency in which the system actually works. The EU recently proposed a plan to cap credit card processing fees to only 0.3% of the value of the transaction, while a US law in 2010 curbed debit-card rates. "It will go away â¨¬" provides levicin of the high fees, adding that square must find other revenue streams before it happens. Restaurante 9 is a new restaurant on Market Street in San Francisco that serves a summer gazpacho with baby herbs. At lunchtime, when I arrive, the restaurant is full of capacity. This is strange: the food is mediocre, the service slow and the decor poor. Yet the diners could not appear happier. That's why Restaurant 9 is not a real restaurant; It is a pop-up proof kitchen in a conference room on the ninth floor of the square's headquarters. The team is running a full-service lunch to train the knots in its new product, Open Tickets, a software tool for sit-down restaurants. (Â"I am the product manager, but today I will be your hostess! â¨¬" A square employee chipper tells me before running into the kitchen). In the back room, the list of missing blackboards, such as inputs for seat changes, order cancellations and peanut allergies. Save for iPads that use WaitStaff, there are small evidence that Restaurante 9 also uses square. Orders are delivered to the kitchen via printer, and when the check comes, it only includes a paper receipt. Not so long ago, to improve communication between waiters and chefs, the square could be provided with a digital-only solution. But the company seems to realize that a chef with Marinara's fingers covered doesn't want to fiddle with an iPad while preparing dinner. Another Sign is learning from past mistakes: at the beginning of 2014, the company started a phone line of customer support. First, the company thought it could make its products so simplified that no telephone assistance would be required, a notion of surprising silicone (but not rare). After years of complaints, the place is sold. Dorsey recently spentphone manning hours and was surprised to find that surveys often do not concern the square ... They were on how to set an iPhone or use iTunes, a strong memory that the customers of the square might not be so Tech Savvy. Open Tickets is just a part of a next suite of services to help merchants in retail, restaurant and services. Rajaram likes to say that the square is now inserted â€ œharvesting mode "The company boasts about 1 million merchants who already use the square register, so it does not insist" It is not a part to imagine that the Piazza Servizi incrementali (and higher margins), such as billing and inventory tools. The square team suggests in other future products, including tools for loyalty points, awards and marketing. Meanwhile, Rajaram is expanding the launch of a product known as square capital, a cash advance program. Since it has a perfect visibility in sales of traders, the non-prestive square, say, $10,000 to sellers (often overnight) in exchange for a slice of future sales until the debt is repaid. The reception at the pilot was immensely positive, which is why the company is seriously scratching the program. (Square has a credit line of $225 million, which is partially used to finance the capital.) Â € "You're always looking for something better," says Jesse Dorogusker's head of hardware, which suggests that Square teammate The new products are only the beginning. Where could the company come after? The lead of the Jesse Dorogusker square hardware argues that traders need help with everything, from â€ œDeliversing rocket to keep the lights to update their comcast internet. »ANCHE redesigning the entrances of the ancient card is on the DACKACK. (â€ "It takes you five minutes to find the date! It's like finding the expiration date on yogurt! Â €) Other hardware is coming, including a new square reader. And many sources have indicated a square credit card has been prototyping - a card that is all black, that some employees have transported around in their wallets in the last year. When I press Dorogusker about it, he says, "We always look for something better. I certainly won, but negeli, but I certainly won everything you announce anything. The square later tells me that you will not have actually launched a credit card. But it is unclear whether traders and consumers are interested in adopting one of its other instruments - or whether the tools will be combined consistently. About 20% of the users of the square market, the company's online storefront product, has never used the square registry. When the company was deciding how to promote the order, according to the Design Director Paco ViÃ ± Oly, â€ "We were wondering, should also say square aboutShould he even have our logo? Â € And as Rajaram describes the various â€ œBuckets "will go after, I fight to take it all in. Â €" We want to be the central operating system of your business, "say Rajaram. It's a catchy cut, but what it means in the real world remains remainspuzzle. Designer Paco ViÃ Â± Oly tries to make the new technological offerings of the square as â¨ â¨iconicâ¨ as original. In fact, ticking through the list of products that square is the market launch, money, cash, feedback, invoices, orders, open tickets, capital, dashboard, appointments "easy to wonder if the company is in panic mode. It is probably more accurate to say that that square is climbing, or that it settles. â¨"If you ask me, was square [capital] on the agenda four years ago? No. But this is learning, is â¨¬ "He says Khosla. â¨"A year and a half ago, would I have said that the order was a big business? No. "Also, it might not matter if all these products work at Unisy, it still gave an approach to See-What-Sight. Is â¨¬ "We to nail every single thing we're trying to do now?" Says Roelof Fill, a square investor. â¨"Corso no. If you're beating a thousand in this business, you're not pushing hard enough. "For now, friar, the CFO, stresses that the company has enough breathing space to experiment. For example, square money allows consumers to exchange money for free through an email or an app. It doesn't fit perfectly with the merchants' merchants' merchants in Square and the company loses money (often in the range of 25 cents) on every transfer. Still the friar is encouraged. â¨"We gave [the team] a bunch of cash and said, "You can't lose more than x; Go see what you can do, â¨ Ã¨ â¨ Ã¨ â¨ â¨¬ In just eight months, the friar boasts that money is already one of the greatest peer-to-peer players in the world; It could easily help users, for example, move cash from country to country, a money transfer system that has long been a highly profitable business for Western Union. â¨"" With most of these new businesses, â¨"" adds â¨"" We start financing them and putting a lot of efforts behind them if we believe that in the next three years, they may be $ 100 million Dorsey Companies grew a beard. A scruffy one, with tufts of ginger and grey. It is not the beard you would have grown after a divorce, or a tragic loss, or a midlife crisis, but a style beard. With Dorsey's lightweight celery frame, button shirt, the beard makes him look like a hipster farmer. It is this artisan person, this self-styled fusion of artist and entrepreneur, who requires a member of the board of Larry Summers to tell me that with Dorsey â¨¨¨ â¨¨ â¨¨ â¨¨ â¨¨ â¨¨ â¨¨ â¨¨ "For design and creativity, it can be the most 1 as close as possible to the works Steve As anyone alive today. "It is true that in a certain light, the parallels to the works are unmistakable ... in Dorsey, from his first company, and in his triumphant return with the square. Yet Dorsey's degree of success, at least so far, makes the comparison a fattening one; had to grow in a global and transformative business, just like the works done with Apple and Pixar, for this reason"If Square succeeds, they'll be this hugely valuable [company] unified around payments", says a CEO at another hot commerce startup. "And if they fail, they'll probably have to go through this painful course correction to become a small but not insignificant payment company. They don't beg, but it will be painful.â Only in Silicon Valley, perhaps, might success seem so unpleasant; anywhere else, building a smaller but sustainable business would be a rare achievement. Yet, Dorsey has always shared the Valley's vision of the world. "Mediocrity is not on the agenda for Jack and society; thinking big is the agenda there, a flaw", says a former employee, who cites Dorsey's so-called 5,000-year plan for Square, which Dorsey said.orsey often talks to his team, despite his absurdity. âI don't think the plan is ever to settle for being a quiet, back-end [service] â wants to create a company that is as influential as Apple.â This may prove to be Dorsey's biggest mistake. In giving it a rating for its performance, you could argue that it should have rolled out additional products first, or that it should not have set expectations so high with the press and the public. But perhaps his biggest challenge will be to come to grips with the possibility that Square could end up as a company that brings real (albeit incremental) value to the world, but never has the revolutionary impact of Dorsey's first startup, Twitter. Dorsey's well aware of the positions. Outside a coffee shop on a quiet side street in San Francisco's Hayes Valley neighborhood, he sips a cappuccino like a gentle breeze flowing purple flowers behind him and a chirps bird at his feet. â€œGo back to that idea of fight or flightâ€, says Dorsey. â€œSome people are like "I like this challenge", he woke up, scares me, but I'm in." And some people are like, "Ah, nope, I'm starting a photo startup." " There is no doubt that Dorsey is in the first field. But when I ask if he'll be remembered more for Twitter or Square, Dorsey shakes his head. "I don't care. Honestly, I don't care!" he says, laughing. He observes that he focuses instead on building "something that resonates with everyone on the planet", so you're really understanding humanity, and that's what I want to hear personally.If Square starts resonating with everyone on the planet, it would solve most of his problems. Meanwhile, Dorsey may have to settle for helping the neighboring bartender to sell some more cups of coffee. And maybe this isn't such a bad fate after all. Everything.
