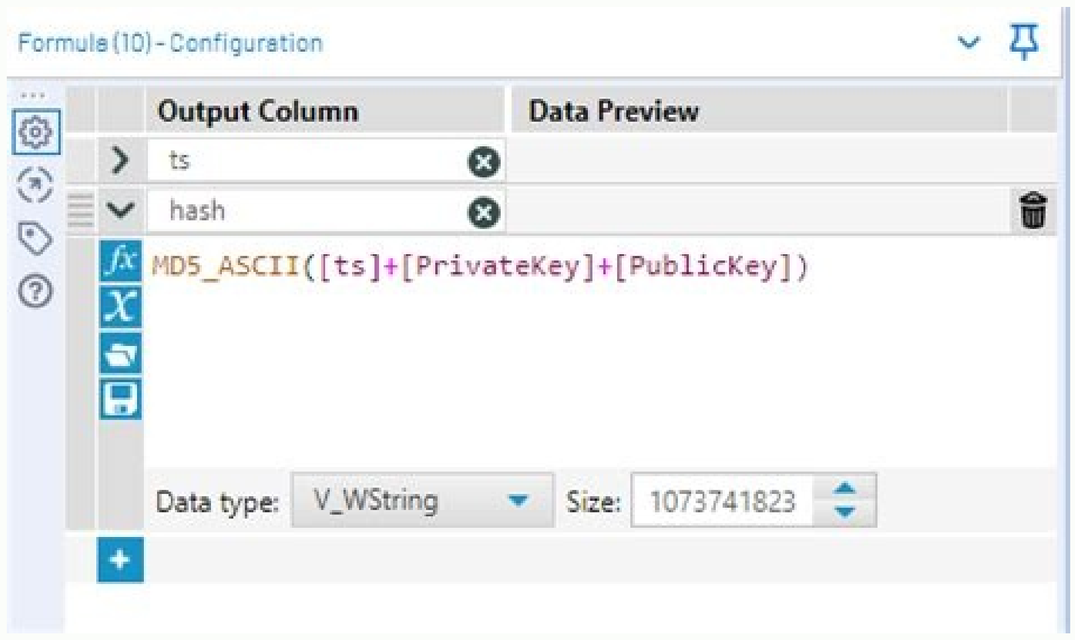
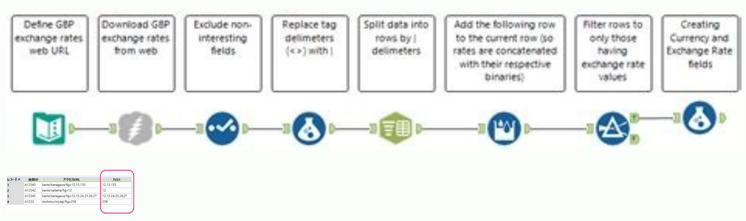
Alteryx image from url





Alteryx download image from url.

this can be handled by some javascript - i don't see this in the latest version, but it was there in one of the previous versions.For this setup to work, you need to install the library and PhantomJS for the head-less browser dependency - instructions are in the below documentation. code - this is provided you pass on a dataframe as 2 columns, 1st one indicating destination (website) and 2nd a correct, full file pathway including filename with extension (i think webshot supports jpg and png, hope these are sufficient for your use case):library(webshot)url_list
