Volume of a solid units

The method to determine the volume of a solid depends on its shape. Regular geometric shapes The volume of a solid object with a normal geometric shape (rectangular box, cube, cylinder, sphere) can be determined using the volume formula for the shape. For example, a good approximation of the battery volume shown below could be performed using the formula for the volume of a cylinder. This battery measured 4.94 cm in height and diameter of 1.42 cm, giving a volume of 7.82 cm3 or 7.82 ml. Objects in shape irregularly because many objects are not regularly molded the â €
