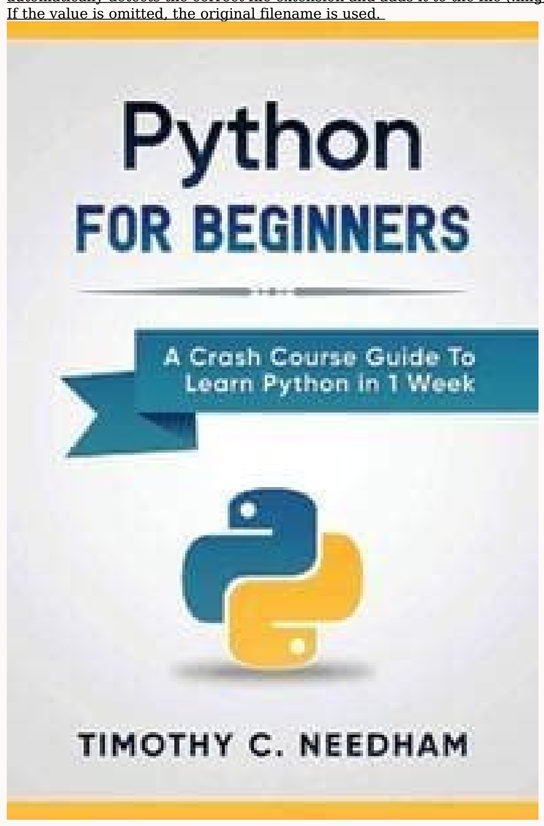
Learn how to create a download link using HTML. For a download link, you can use the download attribute HTML attribute to indicate that the target will be downloaded when the user clicks the hyperlink. A set of HREF attributes. The value of the attribute will be the name of the uploaded file. Valid values are unlimited and the browser automatically detects the correct file extension and adds it to the file (.img, .pdf, .txt, .html, etc.). You can also specify an upload attribute value, which will be the new name of the uploaded file.
If the value is omitted, the original filename is used.



Specify the download attribute value, which will be the new name of the download file ("W3Logo.jpg" instead of "MyW3SchoolSimage.jpg"): Â try it yourself â » Browser support numbers in the table Enter the first browser version that fully supports the attribute. Attribute Download 14.0 13.0 20.0 10.1 15.0 Download W3.CSS From this link: w3.css is a free w3.css. No license required.
