Is there a way to remotely control an android phone. Control android phone from another phone. Can you remotely control an android phone.

You can use Bluetooth to connect some devices to your phone wirelessly. When Bluetooth devices are coupled for the first time, they can automatically couple the devices. When your phone is connected to something via Bluetooth, you will see a Bluetooth icon at the top of the screen. Important: Activate or deactivate Bluetooth by dragging your finger from the top of the screen. Press Bluetooth. Tip: To save battery, deactivate Bluetooth when not used. Bluetooth works in plane mode. Step 1: Coupling of valid Bluetooth accessories: your devices remain coupled until you delete them. Option 1: Use the Settings application (all Bluetooth accessories), sweep down from the top of the screen. Touch and hold Bluetooth. Click on some new devices. If you can not find any new pair of devices, look under available devices or press the next recovery. Press the Bluetooth device name you want to couple with your device. Follow the instructions on the screen. Tip: If you need a secret code and you don't have it, try 0000 or 1234 (the most common passwords). Option 2: Use notification (Quick Connect accessory only) Make sure that: your Bluetooth accessory works with Quick Connect. Many also say "Made by Google" or "Made for Google". Find accessories in the Google Store. Your phone operates on Android 6.0 or higher. Bluetooth and location are activated on your phone. Turn on your Quick Pair accessory and put it in pairing mode. Make sure the accessory is close to your phone or tablet. When you receive a notification, press TAP to couple. You will receive a notification "connected device" or "finished pairing". If you want to define accessories, please click on settings. Tip: If you do not receive a notification, open the Settings app on your phone and press connected devices. Depending on the nearby devices, select the device you want to couple. To find out more, scroll down to find quick pairing accessories. Step 2: Connect while swept out from the top of the screen. Make sure Bluetooth is activated. Touch and hold Bluetooth. In the list of twin devices, press a paired but unconnected device. When your phone and bluetooth device are connected, the device is displayed as "connected". Define, do not find or find dirty bluetooth accessories, rename or choose actions for Bluetooth accessories sweep the screen from top to bottom. Touch and hold Bluetooth. If your accessory is listed under multimedia devices available next to the device name, press settings. If no accessory is listed under previously connected devices, press everyone. SurroundingThe name of the addition, click "Settings". Make changes: to change the name of the investment, touch editing at the top. Touch the exit to refuse. To completely remove the device from your phone, click for forgetting. You can enable or disable additional settings on some devices. Tip. Anyone can change the overall Bluetooth settings in a common tablet. Change the name of your phone or tablet Bluetooth by pulling from the upper part of the screen. Turn on Bluetooth. Click and hold Bluetooth. Click in the name of the device. If you cannot find the name of the device, click more to rename the device. Enter a new name. Click to rename. It is important to find an accessory for a quick connection: when you are registered in a fast connection pair, your Bluetooth accessory will be connected to your Google account. Other attached devices can recognize the recently connected accessory and automatically connect to a pair with an accessory. Open the "Settings" application on your phone. Touching devices saved on Google devices and exchange. Tip. Turn on the device automatic storage to automatically save the device. Google collects certain information to quickly connect your Bluetooth devices using devices that use your Google account. The part of this function is used by Google Play Services. For example, a pair of quick connection collects: personal information for functional goals, for example, a name that you enter your Bluetooth device during configuration. Performance data and use information for analytical purposes. The refusal of quick connection of fast connection of data collected by the pair is sent encrypted. You can delete the collected data when you refused a quick connection in the couple. Open the "Settings" application on your phone. Touching devices saved on Google devices and exchange.
