I'm waiting for wonderful things. Incoming calls still not working? Oh cool - Wire Guélectrice is on! GAPPS already UC is already terrible, great job! Wi-Fi and Playstore work flawlessly, gestures are much easier than in Miui. Some animations in the frame were stuttering, like a daily driver for me =) Thanks! Edit - after the test there were a few issues loading COD Mobile from Playstore (too slow) and video throughout its input loop (Facebook and animations I mentioned earlier). Failed to restore interim backup and WhatsApp failed to restore backup = Last modified: March 17, 2020 Testing in progress, great job! Wi-Fi and Playstore work flawlessly, gestures are much simpler than miui, some animations in settings look like a daily driverI =) Thank you! Issue - After some tests, there was a problem with the download of COD mobile from Playstore (very slow) and usually the movies are looped (Facebook and the animations I mentioned above). Also migration backup can't restore and WhatsApp couldn't restore backup = did you use S Migrate 3.0 A3? 1 to backup? Did you use the 3.0 A3 migration? 1 to backup? Yes, but this is my first time using it. ROM installed, restarted, magisk, restarting, backup.zip, restarting, but you can't find the metadata. Since I cleared /data/cache and//system to install the ROM, I had to backup to PC using ADB/SDCARD/MOVE and REPORT after flashing, maybe that was the problem too. Yes, but this is my first time using it. ROM installed, restarted, magisk, restarting, backup.zip, restarting, but you can't find the metadata. Since I cleared /data/cache and//system to install the ROM, I had to backup to PC using ADB/SDCARD/MOVE and REPORT after flashing, maybe that was the problem too. Check any File Explorer application and see if you can see the internal memory. If you don't, this ROM has the same problem with cesium. If so, you cannot use the internal memory with this ROM. If you can see the internal memory, you need to do the following. 1. Boot into ROM without flashing stock zips. 2. Install Solid Explorer (or similar main explorer) 3. In /data/local/tmp/tmp/ directory. The full path should be /data/local/tmp/migrate_ca 4. Extract it into a hard explorer, select all, press the copy icon in the lower left corner. Now go to the above path and paste everything. 5. Install the latest version of midfielder 3.0 (use #download_helper. 3.0). If necessary, protect Google Play. Install the wizard. 6. Open the attached application. All applications should be found. Restore them. In case of errors related to permissions, join the Telegram group with "mismatched data" in Helper's "preferences". The latest alpha has no issues from what I heard and is currently only available on telegram. Reactions: Antony.PS Check any file explorer application and see if you can see the internal memory. If you don't, this ROM has the same problem with cesium. If so, you cannot use the internal memory with this ROM. If you can see the internal memory, you need to do the following. 1. Boot into ROM without flashingloops. 2. Install Solid Explorer (or a similar main observer). 3. Create the Migrate_cache folder in/DATA/Local/TMP/. The full path should be/Data/Local/TMP/Migrate_cache. 4. Directly remove the entire contents of the backup of the ZIP file to this directory. In Solid Explorer, open the ZIP file, select everything and tap the copy icon in the lower left corner. Now follow the path indicated above and insert everything. 5. Install the latest version of Helper 3.0 (use #download_helper.3.0). If necessary, temporarily disconnect the Google Play protection. Install the assistant. 6. Open the auxiliary application. All applications must be recognized. Return them. In the case of errors related to permissions, turn on the option in the “settings” of the assistant: “move the data” join the group “migration of telegrams” from here. As far as I heard, in the last alpha version there is no this problem, and at present it is available only through Telegram. The internal storage works, I tried it first because I had problems with Celsiumos. Next time I will try to unzip directly into the folder. I am free now because I need to play Cod Mobile =) The new version of Evolution X is now available! Source Changes Journal: - The Evolution X List of Changes Log as an APEX Support Log (archiving is now corrected) - Failed animation (Evolution X team deleted this correction for no reason) You can find it in the first post post. Reactions: D4RK7355608, ATIFNR, Hugo.gabriel999 and 4 more these are the advantages of “allow the fake of the signature” when GAPPS already includes LMAO, which is mainly used in Microg. Is there a protective grid in this firmware? Last change: March 24, 2020, this ROM is much better than the previous one. My small complaint is that the brightness seems too high. If there is another way to reduce this, please let me know. Thank you, and I hope this ROM is still supported. Please correct the stutter of the 4K HDR video on VLC and MX ---------- The previous message was at 10:00 11:00----------" ------ stuttering when playing a 4K HDR video on VLC and MX players. Please correct. Everything else works fine, only this problem. Reproduction of the 4K HDR video works well on old versions and versions of Miui. I just saw this issue on 03/18/2020. Assembly from here and Cesium OS. Can you add 64MP support in the next update? First of all, thanks to the creators. I have the following questions: 1- is it necessary (if we are still in the firmware of Android 9) perform Fastboot firmware included in the Guide -info-Psa- Redmi Note 8 Pro- Megathread. Reinstall the starting point9? (Or does Evolution later cause Flash problems?); 2- Where can I find an Indian seller? (I am in the universal ROM, it has a vendor.img file, but it is global). Page 2 First of all thanks to the programmers. I have the following questions: 1- Is necessary (while there is still Android 9 ROM) to make a quick start-up flash on guide -info-psa-redmi note 8 pro- megathread "if there are problems with rom flash try again to install" Android "9 starting point? (Or does Evolution later cause Flash problems?); 2- Where can I find an Indian seller? (I am in the universal ROM, it has a vendor.img file, but it is global). xiaomifirmwareupdater.com/vendor/begoniain/ Just copy this URL? Reactions: The loser first thanks to the creators. I have the following questions: 1- Is necessary (while there is still Android 9 ROM) to make a quick start-up flash on guide -info-psa-redmi note 8 pro- megathread "if there are problems with rom flash try again to install" Android "9 starting point? (Or does Evolution later cause Flash problems?); 2- Where can I find an Indian seller? (I am in the universal ROM, it has a vendor.img file, but it is global). It is not necessary to answer the first question, because if the structure works, it will work well. Why you should still do this is an additional security layer. In the event that the creator pushes something that doesn't work as you want and you get a brick, you can easily restore it at home. If you do not follow the LKS and PRELOADER, you will have to contact a service or pay a person on the Internet to unlock your phone. Second question: Different ways to get a supplier: - Use Uranus robot Telegram with "/FastBoot Begonia", browse the archive and download the FastBoot Begonia Cake video version. After pulling out an image that is vendor.img from Images/Vendor.img (I recommend I) - Google Begonia FastBoot Image and download the FastBoot image from a reliable source. Reactions: The pump first thanks to the developers. I have the following questions: 1- Is necessary (while there is still Android 9 ROM) to make a quick start-up flash on guide -info-psa-redmi note 8 pro- megathread "if there are problems with rom flash try again to install" Android "9 starting point? (Or does Evolution later cause Flash problems?); 2- Where can I find an Indian seller? (I am in global rom haBut it's global). I saw the manufacturer's image that was posted in response to one of the ROM threads. Brush them to find it. And yes, you have to beat the preloader and the small intestine 1 and 2 (LK and LK2), as mentioned in the megawyk. I would like to know something about your request to return to the memory because I have never had to carry out a factory reset. But as far as I know, you can flex the factory image with the SPFlash tool or the factory recovery image via the Begoniain provider and a modified/LK preloader. Last issue: March 22, 2020 reactions: Graf ... I would like to know about your request to restore the factory state, since I have never had to reset to the factory settings. But as far as I know, you can flex the factory image with the SPFlash tool or the factory recovery image via the Begoniain provider and a modified/LK preloader. I thoroughly carried out all steps with the file "Vendor.img", which is located in the P ... l Rom-Link. It ended with the beginning of evolutionary animations for 1 hour and the animations never stopped. Original Global Rom reflash (Android 9 Miui 11) + Programmmer Options + Reflect Reload Program + TWRP ([Guide] [Begonia] ...) + Mega Thread 3 Flashes + exact evolution steps again: The 1st load of evolution never ended. That's why I doubted these 2 steps. Thank you for your interest, LPKKJHD and Virgil1111 have also carried out exactly all steps using the provider.img, which is located in the P ... L-ROM link. It ended with the beginning of evolutionary animations for 1 hour and the animations never stopped. Original Global Rom reflash (Android 9 Miui 11) + Programmmer Options + Reflect Reload Program + TWRP ([Guide] [Begonia] ...) + Mega Thread 3 Flashes + exact evolution steps again: The 1st load of evolution never ended. That's why I doubted these 2 steps. Thank you for your interest, including LPKKJHD and Vergil1111, only out of curiosity, what are you using? Last issue: March 22, 2020 reactions: Frajofy Loop. I installed Andorida 10 on my Redmi Note 8 Pro, installed TWRP and rolled so far. I install this Rome and my Note 8 Pro stays in the loop and tries to run. I had to return to the official version and wait for someone to tell me why if you can help me, thanks for installing Andorid 10 My Redmi Note 8 Pro, install TWRP and root, so far so much. Install this Rome and my Note 8 Pro stays in the loop while trying to run, I had to return to the official version and waitPlease tell me why, can you help me, thank you please read the messages before your message, namely # 28 (your message # 29) ...: Ok: If I install this TWRP, it stays in the loop and does not reset it by resetting is included , because of that, I thought, but I would like all the gurus to help me on this topic. Guru can help you better if you have done what is shown in Android 9 -8-8-8-8-8-8-8-8-8-8-8-8-8-8-8PRO/How-to/Guide-Note-8-Fro-megathread -T4056527. (Read all this thread, it can help your problem) If you haven't done it, I think you have to go to the Xiaomi center or pay someone online with a special Xiaomi account to unlock Redmi (I don't know) what it is). It happened to me a few months ago and I had to go to the center of Xiaomi (everything is closed here because of the Covid problem) and pay dozens of dollars to unlock my Xiaomi. I also learned that before you do something about this Redmi, you have to read everything very carefully, because. It is a very dangerous flashing device. Last edition: 2020 March 22 My phone works two days ago, I decided it is easy, just run Twrp.3.31.1210 and official firmware and that's all and your phone is unlocked SD (Micro SD U1, XC 1) Just Just for Testing on my RNP 8. I had to use former fat on the official Xiaomi Android 9; But I can use NTF in evolution. I have experienced it and the results are amazing: - when developing on Ex -fat tab it takes 45 "in 1 minute reading/recognition, but if it is a NTFS card, it only takes 5 seconds to recognize it (Note: powerful microphone). SD) SD card contains all music (18 GB MP3 VBR 320kbps 48kz converted with Blade 3.1). My experience on Windows 10 (should be similar to Android): This experience is an external USB 3 micro-SD key, which does not copy directly to the phone card (it is always very slow and can cause planting and damaged card with a large volume)- ex-FAT: insert 18 GB music- number for 2 hours- ntf: Real: Real: Real: Real: Real: Real: Real: Real: Real: Real: 20 minutes Conclusion (Beginner ...): If NTFS is writing and recognizing several times faster than ex -fat, then reading speed much faster or faster reactions: gadmei.tw new version of Evolution X is DEO Roma available. Journal of Source Code editing: - Update the last modification of the EVOX source code: - adding the initial S a circle for resolution between Begonia and Begonia, Aod, LED and Battery Warning andSupport - Improve the surrounding screen, incoming connection, Liedisplay and Wi -Fi Public Internet network - the entire screen ratio and cut -out - hide SRGB switching in the programmer's settings - Can Marlin Brightness. Brightness. Selinux - Turn on the Mac operating system on the Mac operating system on the Mac operating system on Mac, Mac, Mac, Mac operating system on Mac. Accidentally samples - upgrade the nuclear zenith -safe means. Defconfig Add Configurations - Add PPI Support - Disable Memcg and PSI - Enable SLMK - Eliminate LSPEED from File Lock - Speed/ProCet/CMDline,/Percent/PID/MAP I/ProCet/PID/Smaps. You can download it in the first entry. Reactions: D4RK7355608, Helhound0, Khannz7 and 7 others if they come from Mashopy Build to return to Miui Android 9 or remove Dalvik, data and container. Is it worth reinstalling the Indian seller IMG? Hi, DT2W is not working for me. Do I need to install something? Thank you for your hard work! It's nice to see that we are gradually approaching the official agreement. Downloaded and activated. Everything is OK. Minus incoming calls. If you wish, you can share magazines with a group. Last edited: Disc of April 1, 2020. Hi to correct your camera in camera video, go to recording mode, settings, and set the video codec to the H265 to improve (WhatsApp video recording still fails): Polfrank Hello Hel without Google apps My Redmi Note 8 Pro. Thank you for all the holidays. Can French Language Hours find this page? Last edited: On April 2, 2020, I really like this ROM, and I plan to use it every day, but is there a functional camera like Miis? Is it better to use GCAM now? Thank you to the creation team. Tested using an Android car (with a cable connection to the car multimedia center) and cannot operate; The Android Car is trying to connect, close, connect, close (never stop), and the phone starts running again. You cannot use any phone or screen button, except for long -term action buttons, so it starts again. I also have the Galaxy A70 (already Android Q) and I have no problem with the Android car. Last Edited: On April 5, 2020, reactions: Polfrank Page 4 inform me when the NFC is improved. For me, this is the most important priority. 1. Indian Note8Pro is not NFC. 2. Looks like all current additional Roma uses Indian SellerIt's not a secret, you will find it in all relevant discussion children. Your absolute priority should be to read a little more. The only thing I discovered is that non -Indian Rome is considered "waste" - for what reasons ... thanks to the development team. Tested with Android Auto (wired at the Multimedia Center Coach) and you don't start; Android Auto tries to connect, close, connect, close (never stop) and automatically start the phone. Impossible to use pimples or the phone screen other than long pressure on the power to force the restart. I also have a Galaxy A70 (already Android Q) and I have no problems with Android Auto. Evolution X has an Android stroke implementation so that you cannot do anything to correct these reactions: D4RK7355608, Frajofa and Polfrank @Themachite. In your diary you mentioned that the incoming calls are correct. But it is not. I use this version for about 3 or 4 days but the connections do not work yet. Was it corrected or is it a bug in the modification diary? What is "FP" who "accidentally kills the device"? I have Global Qggeuxm Software Global 11.0.2.0. I read about the high risk of damaging this unit because using the Mediason processor. I use Evolution X on other Xiaomi devices and I feel very good. Do you recommend continuing to blink this Rome Redmi Note 8 Pro? Last change: 2020 April 11th Hey Boys. I have Global Qggeuxm Software Global 11.0.2.0. I read about the high risk of damaging this unit because using the Mediason processor. I use Evolution X on other Xiaomi devices and I feel very good. Do you recommend continuing to blink this Rome Redmi Note 8 Pro? No one can comment on tips? No one can comment on tips? It's your phone. This is your decision. What if your phone and phone stop working? Not my fault, I assure you. Decide for that. In my opinion, these Roma are still at the beta -version. They are really stable and well optimized. They watch them for more than a month and seem to have a lot of energy and battery life renewal compared to permission. So I keep the inventory. In the smallest year, until my warranty is over. But you, healthy people. I have Global Qggeuxm Software Global 11.0.2.0. I read about the high risk of damaging this unit because using the Mediason processor. I use Evolution X on other Xiaomi devices and I feel very good. Do you recommend continuing to blink this Rome Redmi Note 8 Pro? It's your phone. This is your decision. What if your phone and phone stop working? Not my fault, I assure you. Decide for that. In my opinion, these Roma are still at the beta -version. They are really stable and well optimized. They watch them for more than a month and seem to have a lot of energy and battery life renewal compared to permission. So I keep the inventory. In the smallest year, until my warranty is over. But thank you. I ask advice when I read that this phone with the MTK processor is easy to break. This is not the first Xiaomi to install my Roma, but I first bought it with this processor. If the risk is normal, I do the procedure if you think 80 % So I ask if there is a very big opportunity to stop as a seller that I have to enter alone in onePost (Indian manufacturer), even though my starting software is 11.02.0 EEE? Weird last time: 2020. April 12 Thank you. I am asking for advice as I have read that this phone with the MTK processor can easily break. This is not the first Xiaomi to install custom software, but I bought it for the first time with this processor. If the risk is normal, I will do the procedure to avoid 80% of the risk. So I ask if there is always a very good chance that it will fail, fellow, there will always be a high risk that something will fail when a custom entry is released. Maybe not the ideal version, maybe Xiaomi fixed something, there's a million. Do your homework, check every detail of this whole ordeal. Even on a prime phone like the S6, it broke if I blinked something I didn't check. Stop asking people for approval and check everything again. Or wait if you're not sure. At the end of the warranty, the phone will receive a full update to Android 11. Or 6 gigabytes of RAM will ensure sufficient performance, despite the amount of malicious programs. Page 5 Touchscreen problem or this software fixed the touch screen on both sides of the screen when touching the keyboard keys "Shift" and "Back" when using gestures in gesture in full screen mode? Quickly pressing this button delay. OK for this rum (evolutionx) should i use this vendor fw-vendor_begoniin_mii_begoniininininglobal_v11.0.0.0.pgginxm_8f956c6413_9.0? And most importantly, the phone should run on Android 9. I have the same version as you and Android 10. Check before flashing and downgrade the version to PIE if needed. So be very careful. And most importantly, the phone must run on Android 9. Be careful. Thanks, but I can't return the previous version of Android 9 on the refund issue. This requires an authorized Xiaomi account. So there is no possibility to find a vendor related to Android 10? What do you want to tell me? No need to update to Android 10? Thanks, but I can't innovate to Android 9 on the wipe issue. This requires an authorized Xiaomi account. So in our case no. Can you find a manufacturer that lists Android 10? Are you telling me I shouldn't upgrade to Android 10? You can innovate from Android 10 to Android 9. An authorized service account is not required. There is no rejection protection. You should just use Miflash eFastboot Android 9 If you want to switch to a lower version. I tried using Miflash but it returns me an error. But should MTK processors use Miflash or SP-Flash? Try renaming the ROM to something simple (1 word) with a folder and pointing to c:/. Then try Miflash again. Sorry, you are sure you understand. I started with Android 9 Pie Firmware (11.0.3.0 -pggeeuxm okay?) installed on Android 9 TWRP OS. I start dalvik/art cache cache system system data from wheer recovery; And Flash Seller.img Indian version (I also found eeu salesman.zip, no good?); Lightning and Rome; Restart recovery and flash magic. Good? My apologies for demanding, but I wanted to understand if I was in the megathead anti-brick when installing Preloader_Begonia.bin. After launching the Evolution Flash X, isn't a preload file overwritten by the risk of bricks? I successfully fled into TWRP and Flashnul I Evo X. Then Flashnul Magisk.zip via TWRP and it failed. Then with Magisk.zip we blincli magisk.zip and it plunged me into Evo X endless animation. I understand that I made a stupid mistake. I've done a dirty Evo X flash a few times but to no avail. I did a full noobs move and didn't turn around from magic. In my opinion you need to go through the whole circle and start over. The only seller photos I found are of Begonia, not Begonia...which is what I need. And now that I've rebooted from TWRP, it hands me straight to fasting. Also shown by downloaded vendor images for routine TWRP installation, but doesn't appear when I click install an image, or does anyone know how to get them? I know it was a little reading, I'll be happy for any help or advice. In particular the link to the Begonian seller that appears in the TWRP "Installation Change" I have successfully Flashnul TWRP and successfully Flashnul Evo X. Then with Magisk.zip we have blincli magisk.zip and it plunged me into the endless animation of Evo X .I understand that I made a stupid mistake. I've done a dirty Evo X flash a few times but to no avail. I did a full noobs move and didn't turn around from magic. In my opinion you need to go through the whole circle and start over. The only seller photos I found are of Begonia, not Begonia...which is what I need. And now that I jumpFrom TWRP it immediately goes to Fastboot. Also, my uploaded vendor's images are showing on the usual TWRP install, but when I click "Install image" they don't show up, or does someone know how to show them? I know it's hard to read, any help or advice would be appreciated. Specifically, the link to the Begon vendor image that will appear in TWRP under "Installation Image". If you can boot TWRP, try a clean firmware (clean cache/dalvik, internal memory, system, data). I think you've already done it a few times. And by the way, when I upload the image of the seller, I always do it with quick trunk. Type fastboot flash vendor "IMG vendor location". Don't trust me because I don't know if there is an alternative and efficient way to do this, but since with OrangeFox vibration fails, this is how I do it. Hope this helps reactions: SAUL93 I appreciate the answer. I did a clean flash twice, but my mistake was deleting the seller's image after these two failed attempts... I browse too many pages and only found the seller's global, ru, ch, indo, eu.. and indian seller image Despite having a pgginxm signature , it's still considered globally (I think). I bought two with this signature Flash TWRP using the vendor's image. I will try the fast bot and move from there, but do I need an Android 9 connected to a paired image from an Indian vendor to hold the phone again? I'm so grateful I didn't break it and I still have TWRP to try and fix my mistakes, but I don't even have a phone until I get it. I'm grateful for the help. Hope it helps anyone who has the same problems as me. At first I was so confused that I didn't have the ROM, it was a reboot from TWRP for a quick start. 1. System / data / Dalvik / Cash 2. I showed this vendor's picture via TWRP. It was the fourth seller. I downloaded it and luckily it worked. I found out that I have no mobile data using AT & T. Settings. .. And a little bit lost what to do next. What suggestions? And does anyone else have this problem? I found out using AT&T because I have no mobile data, cleared SIM card, reset system cache, reset APN to system defaults....I'm a bit lost on where to go next. No suggestions? And does anyone else have this problem? Try using 3G SMAMCARD instead of 4G. I find no problem. I'm on a 4G card and well, I found I had no cellular data with AT&T, I wiped the SIM card, fixed the Cash system, reset the APN to system defaults.. .and I'm kind of lost where it goes from here. No suggestions? And does anyone else have this problem? APN must be selected manually, I am facing the same problem. After manually selecting the APN. Then suddenly mobile data works fine Page 6 Does the camera work in this ROM??? If yes, when is the quality? Thanks, does anyone know if encryption works with this ROM? If not at first, how about using TWRP first, then switching to OrangeFox, then installing that ROM. I think I read what worked for Lineageos - will it work here? All custom ROMs for this device are encrypted by default. Sorry if I'm confused. I think you should take the following steps from TWRP to make sure the ROM is working properly. FASTBOOT-DISABLE-VERITY-DISABLE-check Are you saying that all custom RN8PRO ROM partitions are encrypted and working by default? Is it a problem if TWRP does not support encryption, is there a connection? Thanks, sorry to be confused. I think you should take the following steps from TWRP to make sure the ROM is working properly. FASTBOOT-DISABLE-VERITY-DISABLE-check Are you saying that all custom RN8PRO ROM partitions are encrypted and working by default? Is it a problem if TWRP does not support encryption, is there a connection? Thanks, we don't need to deactivate version and check VBMeta section because Custom ROO already fixed VBMeta and everyone answer Begonia Custom Recovery Support Support Screctiption: D4RK7355608 How stable is it for daily driver? I can't wait to use it on my phone, but I want to make sure it's stable enough for everyday use. Every time I try to download this ROM it fails. Has anyone had this experience? If not, how can I download it to make the move? A new Evolution X update is available, first entry in CHECL to load a new assembly source build: - Evox update 05/15/2020 SOURCE DEVICE Properties - Set up a secure network - Turn on the Pixel 4 footwork (Flame).RIL BLOB - Remove Xiaomi Parts - Replace Snap Camera with Google Camera One - Enable Land Mac Protocol -kernel: - Follow the latest changes in IceCream Q R1.4. Anyone experiencing bugs with the latest update like 4G or some other issue? If anyone has encountered this, please write in this thread to make this wonderful and fantastic Rome more stable and fantastic. Please update the issue here. Great update! But device not available after update, checking CTSProfile:/ may only be because it is a new evolution of X update, see first contribution to download new version Source Changelog: - Evox 2020-05 update - 15 device sources Changelog:- Up to A10 version update few system blocks - Switch to Evolution X Operational Settings - Added more hardware - SaFail network promotion - Upgrade to Pixel 4 (Flamme) Create Fingerprint - Switch to APN line - Apply 6GB-DALVIK KEEP SPITICY RIL RIL -BLOB-RIL PATH-REMOVE Xiaomi Parts-Overwrite Camera with Google Camerago One-Activate MAC Randomized Changelog:-Follow the latest changes in IceCream Q R1.4 so you don't need to fast freeze cream q r1.4? By the way, FP randomly kills the device, is this fixed? Anyone experiencing bugs with the latest update like 4G or some other issue? If anyone has encountered this, please write in this thread to make this wonderful and fantastic Rome more stable and fantastic. Please update the issue here. I couldn't get MMS updates or data from 4G/3G but I think it's a mobile provider issue. Outgoing/incoming calls and texts are no problem for me. Is there any problem with encrypted internal storage, is there a way to flash Begonia ROM without encrypting internal storage? It doesn't matter to me if it's encrypted, but the problem is that it has all sorts of functional issues (apps not downloading, not updating, not saving etc.)! Any ideas? Last edit: May 23, 2020 It's not yet possible to get MMS or data working with 4G/3G, but I think it's a mobile carrier issue. Outgoing/incoming calls and texts are no problem for me. Is there any problem with encrypted internal storage, is there a way to flash Begonia ROM without encrypting internal storage? It doesn't matter to me if it's encrypted, but the problem is that I don't know how to decrypt the internal drive and access it, so it causes other problems.Problems (don't encourage, don't update, save, etc.)! What kind of ideas? YUP 4G data also not working for Pixel experience while I tried but you can try cesium OS and say data is there or not. And if you want to remove the encryption, the data should only be formulated before / after the flicker of Rome when entering. You have a choice when shaping data, but it's necessary if you have encryption issues. Be sure to back up your SD card or computer as formatting can delete everything in your internal memory. YUP 4G data also not working for Pixel experience while I tried but you can try cesium OS and say data is there or not. And if you want to remove the encryption, the data should only be formulated before / after the flicker of Rome when entering. You have a choice when shaping data, but it's necessary if you have encryption issues. Be sure to back up your SD card or computer as formatting can delete everything in your internal memory. I started with Cezium, but it was also encrypted, so I tried Evox and for some reason couldn't start. I didn't scrub your inner memory because I stretched on TWRP of Miui 11. Maybe it's encrypted in stock? I'll give it all in a different format and see if he fixes it. I don't know how to decipher what is encrypted or how it was encrypted so I will try to format everything. I will let you know if I can modify the Cezium data. THANKS! I started with Cezium, but it was also encrypted, so I tried Evox and for some reason couldn't start. I didn't scrub your inner memory because I stretched on TWRP of Miui 11. Maybe it's encrypted in stock? I'll give it all in a different format and see if he fixes it. I don't know how to decipher what is encrypted or how it was encrypted so I will try to format everything. I will let you know if I can modify the Cezium data. THANKS! Yes, it is deciphered when training everyone. But I don't know that this format is needed before flashing Roms or after flashing Rome. So let me know how to format before flashing the ROM -zip file or after. P. Yes, it is decrypted if you format everything. But I don't know that this format is needed before flashing Roms or after flashing Rome. So let me know how to format before flashing the ROM -zip file or after. Formatting internal memory solved cipher edema, last night I formatted some flashes so I'm not sureFROM 4G / 3G / anydata with Cez, Evox or PE. Always thinking the problem is on the carrier end as I have had this problem before which has been resolved by tech support. Let me open it! Internal memory formatting was repaired with weird encryption, I formatted it several times in many epidemics last night, so I don't know if I'm inclined to preflash format after flash format! FROM 4G / 3G / anydata with Cez, Evox or PE. Always thinking the problem is on the carrier end as I have had this problem before which has been resolved by tech support. Let me open it! As far as I know, data and volte works fine only on MIUI ROM. So if you can't use wi-fi, you have to use MIUI Redmi Note 8 Pro for now until the user ROM fixes this issue. Internal memory formatting was repaired with weird encryption, I formatted it several times in many epidemics last night, so I don't know if I'm inclined to preflash format after flash format! FROM 4G / 3G / anydata with Cez, Evox or PE. Always thinking the problem is on the carrier end as I have had this problem before which has been resolved by tech support. Let me open it! Hey guys, I have a new solution that you can try to reset your APN setting. I didn't try it, but many people said that data worked after APN :laugh :: ok: this can confirm that mobile data is also not working, even after resetting APN configuration and manual configuration, mobile data completely. I advise everyone to use PitchBlack recovery to flash with RAM instead of TWRP. I couldn't even install these roms with TWRP Coz still stuck on google logo. So I tried Pitchblack and everything worked with the first lamp. Try posting a critique if that helped? Last modified: June 1, 2020. For me, mobile data works with perfect start. I advise everyone to use PitchBlack recovery to flash with RAM instead of TWRP. I couldn't even install these roms with TWRP Coz still stuck on google logo. So I tried Pitchblack and everything worked with the first lamp. Try posting a critique if that helped? You have used LR TWRP and not Agetafabuloud TWRP reactions: D4RK7355608 if I don't use stock ROM where all my internal memory will be wiped. (That is, photo, music, etc.). Because there is no SD card setting in Redmi Note 8 Pro. Good advice. If I use a non-standard ROM,My entire internal memory is deleted. (e.g. photos, music, etc ...). Since Redmi Note 8 Pro has no SD card option. Nice tip. Hello, where did you buy it? The Redmi Note 8 Pro has a micro SD card slot. And all data should only be forgotten if the internal memory is encrypted and you cannot use it even after installing the Rome. If not, nothing has to be deleted. Be careful because you can lock your device. And yes, there is an SD card option, so don't lie. Reactions: Ifraz Hey, where did you buy it? The Redmi Note 8 Pro has a micro SD card slot. And all data should only be forgotten if the internal memory is encrypted and you cannot use it even after installing the Rome. If not, nothing has to be deleted. Be careful because you can lock your device. And yes, there is an SD card option, so don't lie. Just do it. Listen. It has a common SD card slot. Thanks: laughter: There is nothing to lie. Can the user-defined ROM take a standard 64 megapixel photo instead of taking pictures in 64 megapixel mode? I don't try to click on a 64 MP photo in a custom Rome. But when I read the post, many people say that the standard camera is broken at 64 MP, you have to use GCAM. But I'm not sure because I didn't try it. I can confirm that mobile data does not work even after reset the APN settings and manual configuration. My APN didn't work either. I added my APN and then it still didn't work, but then I deleted all other APNs and restarted, then it worked. Hope that helps! Reactions: I could not get MMS to work with this Rome after I had set the pole frank apn or restarted and restarted to the default settings. The only thing that worked for me was the flash of the CFW-ROM and it worked immediately without any problems. @Temalachit Hello. I try to find out why the network connection was interrupted this morning ... The SIM card works on my other telephones, but my RN8P does not indicate any service. (I don't say that it is the Rome ... or the kernel, so take it calmly) I just wanted to know whether this is a known problem or something else ... I have not yet tried anything to remedy this , apart from reset the network settings, but that didn't help. You or someone else would be very helpful.Page 8 @themalachite Hello. I'm trying to figure out why my network connections disappeared this morning ... SIM works on other phones, but RN8P does not speak. (I'm not saying that this is a rum .. or a core error, so be soft) I wonder if it is just a known problem. .. I haven't tried anything except to reset the network parameters to solve the problem yet, but that didn't help. Your help or otherwise is very appreciated. Knowing the existing building problem caused by some telephone commitments (there is also this problem in the previous PE version for most official devices) should be solved in subsequent building responses: Polfrank and HELHOUND0 BTW passes to POSP CFW. They can go back to Evox, they also switch to CFW. So I think Volte will be corrected in the next update. Because OS Cesium has already been corrected, but for now it is not open to everyone. So wait for another incredible update. The developer makes this ROM lethal, then hey people, a new rum comes out. Wait for the developer's message in Changelog and I saw the new version of Fox broadcast like this, so tomorrow is June 11th. Use and help developers develop. :/D New Evolution X Update to CFW version to convert megathread to convert megathread: • First official version • Evolution x 11/06 // Correction DT2W € Correct the video code solvent for specific applications and websites - do you correct certain GPU rejection? ¢ Remove unnecessary blobes [protected e -mail] already created - remove F2FS (TEMP) support - Refactor system and seller making. • Go to Android_app_import in sellers • Includes the zennitsu arrangements before the Build fingerprint to Flame One. Others help me develop flash x 4.4 but I can't find dual sims. Reflash CFW, Evolution x 4.4, does not work. I found the answer: If you don't have a SIM card in the first run, just restart! Limited and does not work! End Change Date: 13 June 2020 Evolution x Update Don't forget to follow Megathread for current CFW compilations Changelog: Corrupted Dot Correctedâ¢ Some apps and video code for Solvecor website â¢ Fix some GPU blocks â¢ Fingerprint black screen â¢ Remove unnecessary blobs â¢ Remove f2fs (temp) support â¢ Build system and rearrange provider support, go back to â¢ liveDisplay â¢ for Snapcamera v2 provider variant go back to â¢ provider to android_app_import. See the first post on the latest Qs build, which also broke the flashlight (turns on the lock too. Tweak settings). So there is a TWRP zip that fixes the problem. Just install it in TWRP and the reboot fix will be in the next update edit : 13 cheers fingerprints 2020
